with West Coast Windows

West Coast Windows presents the **PRO-3 Program™** for architects, designers, developers and builders.

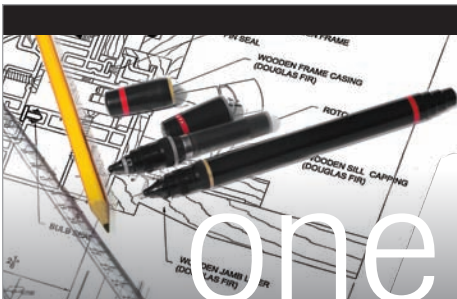

Design. Spec. Build. The **PRO-3 Program™** was created to better serve our commercial customers who have specific requirements when designing and building. **PRO-3 Program™** saves time and saves money on custom and multi-unit projects. These savings are delivered through **CAD Drawings, Colour and Warranty** (an extensive palate of warranted colour-fast colours) and **Flexi-Liner™** (a proprietary One-Touch Finishing System). Professionals can see projects through with confidence, from start to finish AND beyond, with West Coast Windows.

We're with you start to finish.

With West Coast Windows **PRO-3 Program**,™ develop projects with confidence using these easy options:

one

CAD Drawings

To add value and save time during the design phase of projects, designers and architects have full access to the CAD drawings of the entire collection of West Coast Windows' products. For large-scale projects and developments, custom CAD drawings can also be a no-charge option.

Users can instantly see what any of our windows might look like in their drawings and can easily present a variety of options to their clients and stakeholders.

two

Colour and Warranty

Extensive colour-fast exterior palette with 20-year warranty. On top of a lifetime warranty on the windows, builders and buyers can be confident that the colour chosen will stay true for a good, long time.

Window and door frames coated with **SuperCoat**™ Advanced Colour Technology (PVC, composite, wood and metal (as approved)) give customers more options and better colour protection than ever before.

- Safe, waterborne and environmentally friendly with ZERO VOCs.
- Proven durability in all weather conditions; no peeling, flaking or cracking.
- Lasting colour vibrancy.
- Expanded colour and gloss retention.
- High abrasion and humidity resistance.
- Designed to meet all international standard requirements.
- Custom colours available on request.

three

Today's rain screen requirements make using wood windows in new construction a finishing headache. The challenge of aligning inside mouldings can be time-consuming and frustrating for finishing carpenters, wasting materials and money.

Our proprietary **Flexi-Liner**™ One-Touch Finishing System allows for up to 1/2" of adjustment on the liner, making for easy adjustments to satisfy finishing alignment anomalies. As installation adjustments may require as much as 1/2" in one area and as little as 1/4" in another, West Coast Windows' **Flexi-Liner**™ allows for easy adjustment to bridge these issues quickly, vastly simplifying the finishing process.

Find out more about what our **PRO-3 Program**™ can mean for you and your project. Call, E-mail or visit us on-line.
